No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 6, App. Sequence 22, App. Sequence 22, App. Sequence 21, App. Sequence 11, App. Sequence 11, App. Sequence 12, App. Sequence 12, App. Sequence 19, App. Sequence 20,

Sequence 4144, Application US/09134001C

Patent No. 6380370

GENERAL INFORNATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: UVCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BD1DERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: B0100 NUMBER: US/09/134,001C

CURRENT FILING DATE: 1998-08-13

PRIOR APPLICATION NUMBER: US 60/064,964

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-08-14

SRIOR PPLICATION NUMBER: US 60/055,779

WUMBER OF SEQ ID NOS: 5674

LENGTH: 243

WUMBER OF SEG ID NOS: 5674
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 5
US-09-115-127-5
US-09-115-127-5
; sequence 5, Application US/09315127
; Patent No. 6446390
; GENERAL INFORMATION:
; APPLICANT: THE University of Tennessee, c/o Richard Cox
; TITLE OF INVENTION: Stable Envelope Proteins for Retroviral, Viral and
; TITLE OF INVENTION: Liposome Vectors and Use in Gene and Drug Therapy
; FILE REFERENCE: 44137-5023, U. of Tennessee
; CURRENT APPLICATION NUMBER: US/09/315,127

A; Residues: 1-113 <VRA>
C; Comment: This chain was isolated from a myeloma protein that binds inulin.
C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer; immunoglobulin
F;15-100/Domain: immunoglobulin homology <IMM>
F;22-98/Disulfide bonds: #status predicted

```
This sequence represents the heavy chain variable region (VH) of murine anti-CD23 (FCERII) monoclonal antibody Cl1. The invention provides altered antibodies, such as chimeric or humanised antibodies, such as chimeric or humanised antibodies (see AAY32263 which comprises sufficient of the antibodies (see AAY32263), which comprises sufficient of the antibodies (see AAY32264 59) to render them capable of binding to the CD21 type II molecule expressed on capable of binding to the CD21 type II molecule expressed on the CD23 formation in human therapy, for the treatment of arthritis, lupus erythematous, Habilmoto's thyroiditis, multiple sclerosis, diabetes, uveitis, dermaitis, psoriasis, uritoaria, nephrotic syndrome, glomerulomephritis, inflammatory bowel disease, ulcerative colitis, crohn's disease, Sjogren's syndrome, allergic asthma, intrinsic asthma, acte asthmatic exacerbation, rhinitis, ecema, graft-versus-host disease, COPD, insulitis, bronchitis containing the proncit chambetes (particularly type I diabetes), and B-cell malignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and
                                                                                                                                                                                                                                                                                                                                                             Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 98; DB 21; Length 137; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                     This sequence represents complementarity determinating region 2 antibody C11 (see also AAY32263). The linention provides altered antibodies, such as chimeric or humanised antibodies, which comprise authodies, such as chimeric or humanised antibodies, which comprise the subdies is such as chimeric or humanised antibodies, which comprise the sufficient of the amino acid sequences of C11 light and heavy chain CDRs (see AAY32254-59) to render them capable of binding to the CD23 type II molecule expressed on haemacopoietic cells. The antibodies of type II molecule expressed on haemacopoietic cells. The antibodies of type II molecule expressed on haemacopoietic cells. The antibodies of abetes, uveitis, dermatitis, portasis, multiple sclerosis, diabetes, uveitis, dermatitis, profiles, untiliple sclerosis, colitis, Crohn's disease, sinflammatory bowel disease, ulcerative colitis, Crohn's disease, Sjognen's syndrome, allergic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, cathma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, (particularly chronic bronchitis) or diabetes (particularly type II diabetes), and B-cell malignancies (claimed). They are also useful certaining the binding acute of the expension of the binding acute of the collines between CD23 and various ligands and

                                                                                                                           The present sequence may be used in the activation of new ketone prodrug compounds containing active agents. The ketone derivatives are useful as carriers for antitumour agents such as cytocoxic agents, where the antitumour agent is a microtubule stabilising agent such as paclitaxel, epothilone or its therapeutically active analogue or an anthracycline antibiotic such as doxorubicin or its therapeutically active analogue. The ketone derivatives are useful for targeted drug delivery. The inactive molecules in the ketone compounds are converted to active molecules by retro-Michael reaction. The antibody has bifunctional activity and specifically immunoraects with cell surface antigen of a target cell. The active ingredients can be mixed effectively with excipients as per deelired amount along with the buffering agent to enhance the effectiveness and activity of the

This amino acid sequence represents the heavy chain of humanised anti-CD23 (FCERII) monoclonal antibody Cl1, composed of a human cramework (HSIGKIVI) and the heavy chain complementarity determining regions (see AAY32257-59) of murine antibody Cl1. The DNA was constructed by splice overlap FCR. The invention provides altered antibodies, such as chimeric or humanised antibodies, which comprise sufficient of the amino acid sequences of the Cl1 light and heavy chain complementarity determining regions to render them capable of binding to the CD23 type II molecule expressed on capable of binding to the CD23 type II molecule expressed on capable of binding to the CD23 type II molecule expressed on capable of antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, upon erythematosus, Hashimco's thyroiditis, multiple sclerosis, upuse erythematosus, Hashimco's thyroiditis, multiple sclerosis, upuse erythematosus, Hashimco's thyroiditis, multiple sclerosis, upuse erythematosus, Hashimco's thyroiditis, multiple sclerosis, capabees, uveitis, dermatitis, inflammatory bowel disease, ulcerative colitis, crohn's disease, Sjogren's syndrome, allergies, allergie asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, cecema, graft-versus-host disease, COPD, insulitis, bronchitis asthma, and B-cell malignancies (claimed). They are also useful for studdying interactions between CD23 and various ligands and consistent and becall malignancies (claimed). They are also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mouse; humanised antibody; CC-chemokine receptor 2; CCR2; nephrotropic; neuroprotective; immunosuppressive; human immunodeficiency virus; HIV infection; cytostatic; vasotropic; leukocyte trafficking; allergy; inflammatory disorder; autoimmune disorder; rheumatoid arthritis; shock;

The patent discloses a humanised antibody or its antigen-binding fragment, having binding specificity for CC-chemokine receptor 2 (CCR2), comprising an antigen binding region of non-human origin and at least a portion of an immunoglabulin of human origin. The manised antibodies are useful for inhibiting the interaction of a cell expressing CCR2. They are useful for inhibiting or treating thy infection. The proteins of the invention are useful for inhibiting or treating cleukocyte trafficing, for treating CCR2-mediated disorders such as their inhibiting restences; attended antibiding restences; attended disorders such as their for inhibiting restences; attended allocation of a medicament for treating CCR2-mediated disorders such as arthritis and multiple setences; attended allocation of a medicament for treating CCR2-mediated disorders cand in the manufacture of a medicament for treating allergy, anaphylaxis, and in the manufacture of a medicament for treating allergy, anaphylaxis, malignancy, chronic and acute inflammatory glomerulopathies, acquired increvention, including angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting narrowing of the lumen of a vessel in a mammal, and inhibiting neurointimal hyperplasia of a vessel in a mammal, and inhibiting neurointar intervention.

The present sequence is mouse germline heavy chain variable (VH)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
multiple sclerosis; atherogenesis; atherosclerosis; restenosis; asthma; anaphylaxis; malignancy; inflammation; stenosis; allograft rejection; fibroric disease; angioplasty; acquired immune deficiency syndrome; AIDS; inflammatory glomerulopathy; vascular intervention; neolintimal hyperplasia; VH; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Humanized immunoglobulin for treating a CC-chemokine receptor 2-mediated disorder in a patient, comprises a binding specificity for CCR2, and a non-human antigen binding region and human immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Сарв

The present sequence may be used in the activation of new ketone prodrug compounds containing active agents. The ketone derivatives are useful as carriers for antitumour agents such as cytotoxic agents, where the antitumour agent is a microtubule stabilising agent such as paclitaxel, espointions or its therapeutically active analogue or an anthracycline antibiotic such as doxorubicin or its therapeutically active analogue. The inactive molecules in the ketone compounds are converted to active molecules by retro-Actable reaction. The antibody has bifunctional activity and specifically immunoreacts with cell surface antigen of a target cell. The active inspecifients can be mixed effectively with excipients as per desired amount along with the buffering agent to enhance the effectiveness and activity of the

binding fragment of the SM3 antibody bound to a peptide recognised by the epitope binding site of SM3. The products and methods can be used to develop agants for the detection of tumour calls and for therapy against tumours. MUCl epitope minics can also be used to prevent or decrease immune response, e.g. in the therapy of diseases caused by autoimmune responses (such as arthritis, multiple solerosis, asthma or disbates), allergies, inflammatory disorders or transplant rejections such as graft versus host disease. The present sequence represents the amino acid sequence of a heavy chain variable region of SM3 antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Amino acid sequence of a synthetic branched mucin type glycolipid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a process for preparing a crystal using cadmium. Structure factors or structural coordinates obtained from the crystal of SM3 antibody bound to an epitope can be used to design mimics of the antibody or the epitope. The crystals—comprise at least an epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SM3 antibody; epitope; mimic; crystal; tumour; MUC1 epitope; allergy; immune response; arthritis; multiple sclerosis; asthma; diabetes; inflammatory disorder; transplant rejection; graft versus host disease.
                                                                                                                                                                                                                                                                                              835.

                                                                                                                                                                         The present sequence represents a branched mucin type synthetic glycolipid. A gene fragment encoding the V region of the heavy chain of an antibody recognising the present protein is claimed. The antibody gene fragment is useful for the development of cancer treatments and diagnosing agents.
Recognising branched mucin type synthetic glycolipid - using gene fragment of an antibody, useful in cancer treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents the heavy chain variable region for monoclonal antibody (Nab) 488, which immunoreacts with a lead cation. The sequence was derived from RNA isolated from mouse hybridoma cells. The protein can be used for binding heavy metals, such as lead cations. It can be used for detecting, removing, adding or meutralising the heavy metals in biological and inanimate systems. It can be used in such compositions as perfumes, commerciae, plarameceuticals, health care products, skin treatment products, pseticides, health care products, skin the products, pseticides, health care products and production of semi-conductor and integrated circuit components and production materials for electronic components. The products can provide for applications involving minute amounts of specific heavy metals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antigen binding site; immunoglobulin; cancer antigen; immunological; antibody; tumour; human; mucin; cancer; cytostatic; hybridoma;

The present invention describes a monoclonal antibody (Mpb) (1) that binds to a human breast cancer antigen that is also bound by Mbb 454C11 and 52C29 (produced hybridoma ATCC HB8484 and HB8696, respectively). Also described is a hybridoma that produces (1). (1) is useful in specific binding assays, affinity purification, drug or toxin targeting, imaging, and genetic or immunological therapeutics for various cancers. The present sequence represents a VH domain derived from a 2G3 hybridoma, which is used in the exemplification of the present invention.
Monoclonal antibody capable of binding to human breast cancer antigen useful for affinity purification, drug or toxin targeting, imaging, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric antibody; monoclonal antibody; Br-3; antibody engineering; tumour; antigen; breast carcinoma; colon carcinoma; ovary carcinoma; cancer; diagnosis; therapy; heavy chain.

                                                                                                                                                                                                                                      The heavy chain variable region (AAW06212) of mouse monoclonal antibody Br-3 is the product of a cDNA clone (AAP149437) isolated from a Br-3 hybridoma cDNA library. MAD Br-3 (IGG1) binds to an antigen that is expressed on the surface of human lung, breast, colon and ovary carcinomas, but not on most normal adult tissues. The heavy chain and light chain variable regions (see also AAW06211) of B38-1 can be linked to human constant regions and expressed in transformed host cells. Novel mouse-human chimeric antibodies (see also AAW06209-10 and AAW06213-18) can be produced that have specificity to human tumour antigens and can be used for the treatment and
                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                             Chimeric mouse-human antibodies - recognise a human tumour antigen, used for the treatment and diagnosis of human cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Heavy chain variable region; murine antibody Br-3; antibody ING-1; chimeric immunoglobulin; human tumour antigen; chimeric antibody; treatment; human cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The sequence was used to create chimeric mouse-human immunogalobulins which recognise the human tumnour antigen bound by antibody ING-1 (produced by hybridoma cell line ATCC HB 9812). The chimeric antibodies also have an antigen-binding site that competitively inhibits the binding of antibody inG-1, and mediate competitively inhibits the binding of antibody antibodies and antibodies can be used for therapeutic purposes in the resembnic of human can be used for therapeutic purposes in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chimeric mouse-human antibodies - prepd. using genes coding for constant human region murine variable region, esp. to 3 tumour

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Br-3 Heavy Chain V Region (mouse).
Horwitz AH,
                                                                                                                                                                                                                                                                                               Example 3; Fig 15; 92pp; English.
```

```
The invention relates to a multifunctional polypeptide comprising a domain with a blinding site that specifically recognises an extracellular group of the NKG2D receptor complex and a second domain which functions as a receptor or ligand. The polypeptide and its associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Multifunctional polypeptides comprising binding sites that specifically recognise extracellular groups of the NKG2D receptor complex and domains which function as receptors or ligands, useful for treating cancers and infectious diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Kufer P, Riethmueller G, Lutterbuese R, Borschert K, Kischel R;

polynucleotide are used for the preparation of a pharmaceutical composition for the treatment of cancer, infections and/or autoimmune conditions. The cancer may be a tumour of the head and neck, stomach, oesophagus, colon, liver, intrahepatic bile ducts, pancreas, lung, larynx, breast, ovary, uterus, cervix, prostate, Kidney, testis, thyroid, bladder or brain, or a melanoma, myeloma, sarcoma, leukaemia or lymphoma. The infectious diseases can be caused by viruses, bacteria, fungi, soctoaca or helmhiths. The autoimmune diseases, bacteria, fungi, sclerosis, Grave's disease, antklosing spondylitis, acute anterior uveitis, Goodpasture's syndrome, myasthenia gravis, insulin-dependent diabetes mellitus, rhummatoid arthritis, pemphigus vulgaris and autoimmune hepatitis. Sequences AAU72820-AAAU72875 represent the NKGZD receptor and the polypeptides of the invention.

                                                                                                              The sequence is used in the prodn. of a chimeric antibody mol. comprising two light chains and two heavy chains, each having a constant region (human) and a variable region (murine) having specificity to an antigen bound by murine monoclonal antibody (MAD) Br-3. The chimeric antibodies can be used for any purpose for which the oxiginal murine MADs can be used, with the advantage that they are more compatible with the human body. They are esp. used for the diagnosis and treatment of cancer.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: Reiter, Robert E.

APPLICANT: Witte, Owen N.

APPLICANT: Witter, Owen N.

APPLICANT: Witter, Owen N.

APPLICANT: Witter, Owen N.

TITLE OF INVENTION: PECA: PROSTATE STEM CELL ANTIGEN AND USES THEREOF

FILE REFERENCE: 30435.54US14

CURRENT FILING DATE: 2000.05-14

CURRENT FILING DATE: 2000.05-14

FRIOR APPLICATION NUMBER: 09/564,329

PRIOR FILING DATE: 1099-07-20

PRIOR FILING DATE: 1999-07-20

PRIOR FILING DATE: 1999-07-20

PRIOR FILING DATE: 1998-01-12

PRIOR PLICATION NUMBER: 60/071,141

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Demoattractant protein - earthworm (Lumbricus terrestris) (fragment)
C; Species: Lumbricus terrestris (common earthworm)
C; Date: 18-Jan-1991 #sequence_revision 18-Jan-1991 #text_change 30-Sep-1993
C; Date: 18-Jan-1991 #sequence_revision J.; Wang, D.; Halpern, M.
J. Biol. Chem. 265, 8736-8744, 1990
A; Title: Purification and characterization of a chemoattractant from electric shock-indu A; Reference number: A36279
A; Reference number: A36279
A; Reference number: A36279
A; Residues: Dreliminary
A; Residues: 1-15 < JIA>
A, Title: Biochemical analysis of mutant alleles of the vaccinia virus topoisomerase I cath R, Reference number: A47146; MUID:93340198; PMID:8393454
A, Accession: A47146
A, Status: preliminary; not compared with conceptual translation
A, Molecule type: DNA
A, Residuas: 1-15 KLEs
A, Residuas: 1-15 KLEs
C, Superfamily: vaccinia virus DNA topoisomerase
